A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The rejection as stated in Office Action, Paper No. 10 is retained and incorporated herein.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Response to Arguments

16. Applicant's arguments filed March 4, 2002 have been fully considered but they are not persuasive.

17. In response to Applicant's argument that Goden et al. does not include the limitation of selectively producing one of a first scene image and a second scene image based on the detected display position and motion of the character. The first scene image is objectively viewing the motion of the character and the second scene image is objectively viewing the motion of the character. The first scene image can be subjectively viewed by the character in any one of Figs. 5(a)-5(e). For instance, items (21) and (23) of Figure 5(a) are subjectively viewed by the

Art Unit: 3713

character. The second scene image can objectively view the motion of the character in any one of Figs. 5(b)-5(f). Figure 5(f) shows an objective view of the motion of a character on a map (Column 13, line 53-Column 14, line 24).

In rebuttal to the applicant's contention that Figs 5(a)-5(f) show various scene images from a character's perspective, Birdseye View, a radar image, etc. and purports the sequence of illustrations in Figs. 5(a)-5(f) are a panning sequence and are not individual scenes which are selectively produced based on the detected display position and motion of the character, the sequence of illustrations in Figs. 5(a)-5(f) are not just a panning sequence. Additionally, Applicant's claim language does not preclude the use of a camera viewpoint as a means to display a first scene image and a second scene image based on the detected display position and motion of the character. The first scene image is objectively viewing the motion of the character and the second scene image is objectively viewing the motion of the character. In Figs. 5(a)-5(f), these illustrations are individual scenes which are selectively produced based on the detected display position and motion of the character. This process is further described in col. 11, lines 48-col. 21, line 27. Furthermore, Goden et al. discloses it is not necessary for the camera viewpoint position to circle completely around the characters, but, for example, the display of the map 26 may halt in the area of viewpoint "5". The camera viewpoint position may follow points 1-6 in Fig. 4 in order, or it may follow them in reverse order, or alternatively, it may follow them in non-consecutive order. The camera viewpoint position may move continuously between these points, or it may move onto points 1-6 only. The camera viewpoint position may move within a vertical plane as shown in Fig. 4 or it may move within a horizontal plane. Moreover, the camera may pan by moving slowly left and right or up and down, or zoom, as in cinematic filming. In

Art Unit: 3713

short, the screen display should be changed gradually to show information sources, such as maps, explanations, and diagrams, which are continuously required, without interrupting the game screen. In doing this, the surrounding scenery and the characters should be included in the display (Column 14, lines 25-42). Therefore, not only are the viewpoints individual screens, but are dynamically produced based on the detected display position and motion of the character (Column 14, line 25-Column 17, line 8).

The viewpoint movement control steps that Applicant refers to (col. 12, lines 36-39) only pertain to a player that is in **transition** from one stage of a game to another stage of a game, not during the actual “playing” of the game.

In response to Applicant’s allegation to the patentability of independent claims 9, 21, 32, and all dependent claims Applicant’s arguments amount to a general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references. General allegations of patentability are not persuasive arguments.

In response to Applicant’s allegation that Goden et al. in view of Mukojima et al. fails to disclose producing different sound effects depending on which of the subjective and objective scene images is displayed as set forth in claim 21, the original rejection is retained.

Conclusion

18. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Art Unit: 3713

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
